Survey Summary and Description

The Connecticut School Health Survey (CSHS) is a comprehensive survey that consists of two components: the Youth Behavior Component (YBC) and the Youth Tobacco Component (YTC). In the fall of 2013, the Youth Behavior Component of the Connecticut School Health Survey was administered to students in Wallingford, CT high schools. The survey is developed by the Centers for Disease Control and Prevention (CDC) and nationally, the survey is known as the Youth Risk Behavior Survey (YRBS). The 2013 version was modified by the CT Department of Public Health and the State Department of Education for statewide use. For Wallingford, it was further modified by representatives of municipal departments and community organizations.

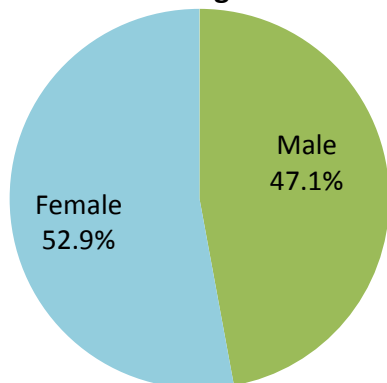

The YBC was completed by 1,704 students in Wallingford public high schools in English or Spanish. The overall student response rate was 88.9% (88.4% at Lyman Hall High School and 89.5% at Sheehan High School). Student non-response was attributed to parental non-consent, student non-consent, absenteeism, field trips or ineligibility (e.g., special education or english-language learners). When applicable, a comparison is provided with results from the statewide sample administered to public high schools in the spring of 2013.

The demographic characteristics of the participating students are as follows:
